Coding & Solution

Date	03 October 2026
Team ID	TEAM-ID-TO-BE-FILLED
Project Name	PocketSmart AI: Your Smart Budget & Recommendation Assistant
Maximum Marks	5 Marks

Solution Summary

Field	Details
Repository Link / URL	https://github.com/kaushalravin/Pocketsmart-AI
Programming Language(s)	Python 3.10+, JavaScript, HTML, CSS
Framework(s) Used	FastAPI, Jinja2, Pydantic; Google Gemini via `google-genai`
Key Features Implemented	Home, Party and Jewelry planners; multimodal outfit analysis; budget adherence check; shopping links; register/login/logout with JWT and bcrypt; session info and data; dashboard; history with full details; offline fallback; model fallback chain; Dockerfile; 43 automated tests; load test
Pending / Incomplete Features	Live price scraping or retailer APIs (links are search URLs); hosted deployment; Google sign-in; PDF export (browser print is available)
Setup / Run Instructions	`pip install -r requirements.txt`, copy `.env.example` to `.env` and add `GOOGLE_API_KEY`, then `uvicorn main:app --reload` and open http://localhost:8000. Full steps in README.md

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments

- The project brief names "Gemini 1.5 Flash Pro". That model does not exist and the 1.5 family is retired. The model is configured with `GEMINI_MODEL` (default `gemini-3.8-flash`) and the app falls back through newer and older models automatically.
- All AI output is re-validated server-side; the model is never trusted for totals.
